To whom it might concern

I know Professor Georgios (George) Zoupanos from the National Technical University in Athens very well since 1983 when we overlapped at CERN as Postdoctoral Fellows. Since then we meet very often in Scientific Conferences and in International Institutes and we have the opportunity to discuss on our common scientific interests. In particular I should mention that

- (a) Prof Zoupanos visited several times DESY, when I was Faculty member,
- (b) I visited several times Corfu, where Prof Zoupanos is the main organizer of high level scientific meetings the last thirty years and
- (c) I have invited Prof Zoupanos to join ITP Heidelberg twice as Visiting Professor for longer periods.

Professor Zoupanos is an established internationally scientist, well known for his contributions in our field of Theoretical Particle Physics.

He has produced a long and well recognized internationally scientific work. Prof Zoupanos has offered a lot to the scientific greek community and in particular to the young scientists by initiating and establishing the Corfu Meetings, which have a very high international reputation.

Yours sincerely

Christof Wetterich
